DETAILED ACTION

Election/Restrictions

Claims 2, 3, 12, 19-21, 23, 24, 26-32, 34-36, 41-43, 45, and 47 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected Species, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 10/30/06.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

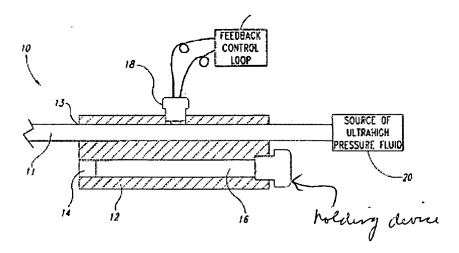

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1, 4-7, 13-18, 22, 25, 33, 37, 39, 40, 44, and 46 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wu (6,442,341) in view of Raghavan et al (6,904,459). Note a heating device for a fluid line, comprising: a heating element 41; and a projection 4, adapted to receive the heating element and be inserted in a well 21 in the fluid line, wherein a well wall of the fluid line is contiguous to an inner space of the fluid. Wu shows everything except a holding device fabricated from an electrically insulating material, adapted to couple the heating element to the fluid line, presassembling the heating device prior to mounting it on the fluid line, and forming the device as a kit.

Raghavan et al teach that it is old in the art to provide a holding device, adapted to couple the heating element to the fluid line. See the Figure shown on next page:

Application/Control Number: 10/519,694

Art Unit: 3747

It would have been obvious to one having ordinary skill in the art to modify Wu by providing a holding device, adapted to couple the heating element to the fluid line, in order to firmly secure the heating device to the fluid line. Raghavan et al is silent as to whether or not the holder is formed of an electrically insulating material. However, it would have been within the purview of one having ordinary skill in the art to form the holder of an electrically insulating material, since it has been held to be within the general skill of a worker in the art to select a known material on the basis of its suitability for the intended use as a matter of obvious design choice. *In re Leshin*, 125 USPQ 416.

Note, with respect to claims 4 and 46, that it would be inherent or at the very least conventional to preassemble the heating element prior to mounting it on the fluid line.

In addition, it would have been obvious to one having ordinary skill in the art to form the device as a kit, since the device would function in the same way whether or not it was considered to be a kit.

Claims 38 and 48 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wu (6,442,341) in view of Raghavan et al (6,904,459) as applied to claims 1, 4-7,

13-18, 22, 25, 33, 37, 39, 40, 44, and 46 above, and further in view of Topfer (4,922,882). Wu in view of Raghavan et al show everything except the fluid line formed as a valve, and the fluid line being utilized in a crankcase venting system of an internal combustion engine. Topfer shows that it is old in the art to provide heating for a fluid line formed as a valve body 6, which is utilized in a crankcase venting system of an internal combustion engine. It would have been obvious to one having ordinary skill in the art to utilize the device of Wu in view of Raghavan et al in to heat a valve body in a crankcase venting system of an internal combustion engine, in order to provide improved heat transfer and temperature control.

Allowable Subject Matter

Claims 8-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Marguerite J. McMahon whose telephone number is 571-272-4848. The examiner can normally be reached on Monday-Wednesday and Friday, 10am-6:30pm.

Application/Control Number: 10/519,694

Art Unit: 3747
